Collecting Access and Storage
Oral Histories

In Task 2-5 and Task 3-6, the team collected oral histories about connections between food and the community’s culture, identities, and histories. It is helpful to document and collect data about these types of connections in the community from a variety of perspectives. This will be particularly useful when you develop your community action and communication plan in Part 7.

Objective

In this task, the team will continue to interview people in the community to collect oral histories about food access and storage over time. Remember that oral history refers both to the method of documenting an oral testimony and the product of that process. In this task, the team will be focusing on the following questions from the question map in Task 1-10:

• What are the connections between culture, identities, histories, and food in a community?
• What evidence could we collect to help define food- and nutrition-related problems in our community?

1. Go to the Task 4-6 folder and get the list of interview questions, interview tips, and safety tips to use when conducting interviews in the community.

Pre-Interview

1. Read through the list of interview questions.
2. Make a list of people in your community you could interview. Think about interviewing the same people from Task 2-5 and Task 3-6, or the people you collected food journals from in Task 3-2. Consider:
   • Family
   • Friends
   • Neighbors
3. Identify any equipment the team could use to record audio or video of interviews.
4. Practice interviewing other team members, taking notes, and using audio/video recording equipment (if available).
5. Read through the pre-interview tips to keep in mind in the task folder.
Interview
1. Read through the interview tips to keep in mind in the task folder.
2. Set up and conduct the interviews.

Post-Interview
1. Compile all notes and any audio/video recordings from the interviews.
2. Analyze the notes and recordings.
   - Describe what you noticed in the interviews.
   - What are some interesting stories or information in the responses?
   - Identify any foods or stories that you were unfamiliar with.
   - Identify any foods or stories that you were familiar with.
   - Which questions did most people in the community have similar responses to?
   - Which questions did people in the community have different responses to?
3. Discuss how these oral history interviews could be useful when thinking about the question, **What are the connections between culture, identities, histories, and food in a community?**
4. Discuss how these oral history interviews could be useful when thinking about the problem question: **How do we ensure good nutrition for all?**
Task 4-6. Collecting Access and Storage Oral Histories

Interview Questions

1. When you were growing up, did your family grow their own food? Do you currently grow your own food? Have a garden or farm?
2. When you were growing up, where did you buy food from in your community (open markets/farmers’ markets, local supermarket)? Where do you currently buy your food?
3. Has the number of access points for food increased or decreased in this community over time? Has buying food at a market or supermarket become more convenient or less convenient over time?
4. Have the characteristics of the places you buy food changed over time in your community? If so, how and why do you think they have changed?
5. How far and how long do you travel to markets to buy food? Has this changed over time? If so, how and why?
6. What were the ways your family stored food at your home when you were younger? Have food storage techniques changed over time in your home or the community?
7. Do you face any challenges to access and store healthy food in your home? If so, what are the reasons for these challenges?

Pre-Interview

Practice interviewing, taking notes, and using audio/video equipment (if available).

Tips to keep in mind:

• The interview should feel like a conversation. It is okay to skip between questions or ask them differently to help the person understand the question better.
• Sometimes the best question is, “Can you tell me more?”
• If your interviewee has paused, give them time to gather their thoughts instead of rushing ahead with the next question. They might be about to say something interesting.
• If you are using equipment to record the interviews, conduct test interviews to make sure the equipment is working properly. When the audio or video is played back, is it clear and easy to hear/see?
• If you are writing down the answers to the questions, practice taking notes while someone is talking. Consider conducting interviews in groups so that more than one person can help write down answers. Then after the interview, teammates can compare their notes for accuracy and consistency.

Interview

Tips to keep in mind:

• If possible, find a quiet, comfortable space that is free from external noise. This is especially important if you are recording these interviews.
• If you’re using audio/video recording equipment, test all of the equipment before the interview.
• Make sure you have a pencil and paper to take notes.
• Introduce yourself to the interviewee and explain the research you are conducting and the purpose of the interview. Explain to the interviewee that your team is interested in learning
more about the connections between food and local community culture, identities, and histories.
- At the end of the interview, thank the interviewee for participating.

Post-Interview Analysis

1. Compile all notes and recordings from the team interviews.
2. Read the notes or listen to/watch the recordings of the interviews.
   - Describe what you notice.
   - What are some interesting things you first notice in their responses?
   - Identify any things they discuss that you are unfamiliar with.
   - Identify any things they discuss that you are familiar with.
   - Identify any responses that are useful when thinking about the question: *What are the connections between culture, identities, histories, and food in a community?*
   - Discuss how the responses from these oral history interviews could be useful when thinking about the problem question: *How do we ensure good nutrition for all?*
