

1-10

# Mapping Questions

In Part 2, you will start your local research. Before you start, it is good to know all of the team's questions. This will help you organize your research.

## Objective

In this task, the team will learn about and organize your questions for research in later parts.

1. Each team member should think about what more they would like to know about food and nutrition.
2. Make a list of all the questions you have or would like to explore about food and nutrition. Remember, they should be written as questions.
3. Think, Pair, Share the questions you developed.
4. As a team, make a list of these questions.
5. **Go to the Task 1-8 folder to get the question map.** 
6. Look at the question map. This map already has some boxes filled with questions.
  - The top question in the dark blue box is the problem question around which you are trying to create solutions: **How do we ensure good nutrition for all?**
  - The green boxes under the problem question create columns related to the Research Guide parts. You will also see a final column where you can put questions that don't seem to fit under any of the other columns right now.
  - The light blue boxes are some different questions you will need to explore to help develop your solutions to the main problem question.
7. As a team, using this question map, take the list of questions created by the entire team and start placing each one under one of the columns.
8. Discuss as a team where you think each question best belongs. Remember, you can always move the questions later in your research. So put them in the last column for now if you are not sure.
9. Remove any repeat questions. Each question only needs to be on the map once.
10. Combine any questions that go together.

This question map will help guide your research in the following parts.

Whenever you are discussing questions at the bottom of the map, think about how they might help you answer the problem question at the top: **How do we ensure good nutrition for all?**

## Research Tip

The question map will help guide the team research. Your team will work to research, investigate, and explore as many of these questions as you can. You will need to come back to this question map many times. So, keep it somewhere safe and easy to access as a team.

# Part One Debrief

Congratulations!

You have completed Part One of your research.

Give yourself a pat on the back.

The team should now have a better understanding of the team and the food problem.

But, do not worry if you are confused or not sure about anything.

Things will become clearer as we research more.

As you see in your question map from Task 1-10, there are many questions we still need to explore.

These questions will guide our exploration of our local community.

This exploration will help us understand the problem better in our local community.

This will also help us develop solutions we think are the best for our community.

Just remember, every community is different.

The answer is not always the same for every place in the world.

But remember, all of this work is focused around our problem question:

**How do we ensure good nutrition for all?**

The next part of your research will focus on mapping the team research site(s).

Then you will survey people in your research site to see what they know about food.

Then you will use this information to start developing ideas for solutions.

This may be confusing.

But do not worry.

It will all make sense as you complete the tasks. Just remember, the team is here to help.

Continue to Part 2: Community

**Notes:**

Lined writing area with horizontal blue lines.

Part One. Problem

# FOOD! Task 1-10 Mapping Questions
