Hi again!
I am trying to solve a problem at my school.
Can you help?
This tree is trying to grow.

It is breaking the sidewalk as it grows.

This is a problem.
I remember that trees need light and water.

They also need space to grow roots and a trunk.
Roots help the tree get water.

A trunk helps a tree grow tall and reach plenty of sunlight.
Do you think this tree has enough space to grow roots and a trunk?
People need safe, flat sidewalks.

Flat sidewalks help people walk without tripping.
Flat sidewalks help people use wheels on the sidewalk, like bikes, walkers, or wheelchairs.
Do you think people can use this sidewalk without tripping?

Do you think people can use wheels on this sidewalk?
The tree needs light, water and space to grow.

People need safe, flat sidewalks.
